

## PRODUCT INFORMATION

FEBRUARY 2017

# 380000 12V Petrol & Avgas Tank Pump

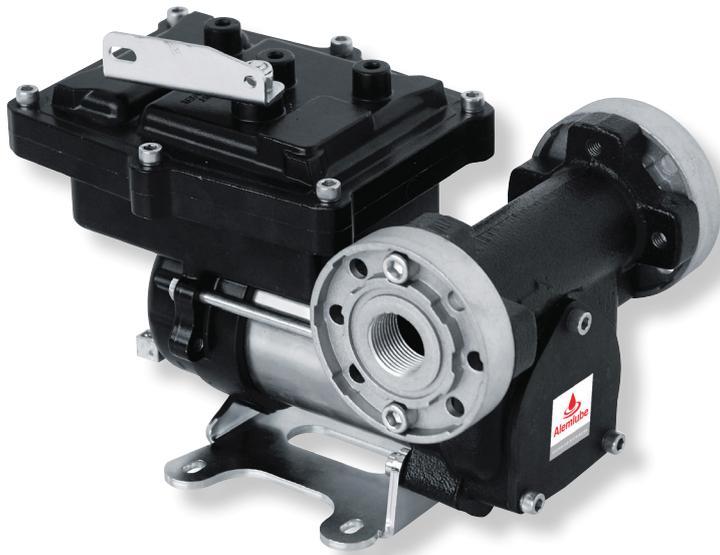

The 380000 12V petrol & Avgas tank pump is highly efficient and ATEX & IECEx certified for fuel dispensing in potentially dangerous and explosive atmospheres.

Capable of delivering up to 75 L/min, with reduced absorption to ensure a long service life, the 380000 12V tank pump is suitable for the transfer of petrol, avgas and can also be used to transfer diesel fuel.

Compact and sturdy construction with a cast iron pump body characterises this versatile transfer pump which can be quickly and safely installed or replaced with flanged meters and filters without the use of sealant.

The 380000 12V petrol & Avgas tank pump incorporates an integrated check and pressure valve designed to reduce the possibility of motor burn out and has a duty cycle of thirty minutes on and thirty minutes off.

Significantly for our markets is the fact that the ATEX and IECEx certification complies with all relevant Australian Standards relating to the transfer of flammable liquids.

### PRODUCT SPECIFICATIONS, FEATURES AND BENEFITS

Sturdy and compact construction

Cast iron pump body

Flow rates of up to 75 L/min

1" BSP(f) inlet and outlet threads

Duty cycle of 30 minutes on and 30 minutes off

Non-return valve and pressure relief valve

Bypass valve built in

Anti-noise filter (electromagnetic compatibility EMC)

Quick & safe connection of flanged components without sealant

ATEX and IECEx certification

Weight of 8.0kg

Also suitable for the transfer of diesel fuel
