# 318008

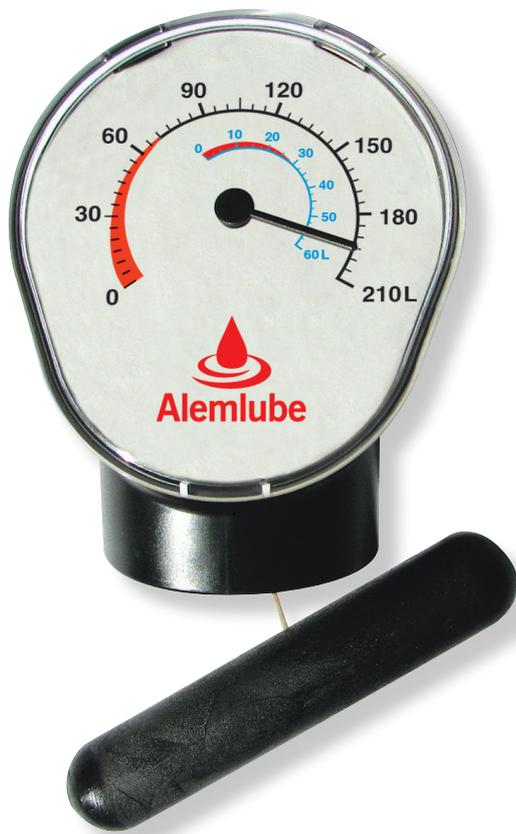

## 60L / 205L Drum Level Measuring Gauge

The 318008 205L Drum Level Measuring Gauge is a unique mechanical measuring device designed to show the level of fluid in a 205L drum at a glance.

Sealed securely in the drum venting bung hole, the 318008 quickly and clearly shows the user how much fluid remains in the drum so that there is never a chance that the fluid which is crucial to your operation's productivity will run out.

Suitable for use with most fluids including oil, diesel, petrol, water, coolant, ATF, waste oil and some non-aggressive chemicals, the 318008 has been designed, engineered and precisely manufactured in Germany with high quality, durable and long lasting materials.

The many benefits of the 318008 20L drum level measuring gauge include the fact that by knowing your fluid stock levels, reordering will be an easy process by being able to visually check levels quickly and effectively.

### PRODUCT SPECIFICATIONS, FEATURES AND BENEFITS

Accurately measures the level of fluids in 205L drums

Simple mechanical operation

Reusable - transfer from drum to drum, fluid to fluid

Polyethylene float has a density of ca 0.84

Use with oil, diesel, petrol, water, coolant, ATF, waste oil etc.

Can also be used with some chemicals

Fits securely in a 205L drum bung

Monitor fluid levels in the interest of security

Inexpensive way to stock keep, stocktake & reorder fluids

Designed, engineered and manufactured in Germany
