

**41007****Alemlube Waste Oil Drainer/Extractor Splash Mat**

Control oil splashes in the workplace

March 2024

**The 41007 Alemlube Waste Oil Drainer/Extractor Splash Mat is the ideal splash mat to use in busy vehicle workshops where funnels and pans are used for draining any type of engine liquid.**

The mats are easily positioned inside a funnel or pan and can be cut to size to fit.

The pad material resists engine oil, transmission fluid, engine coolant, brake cleaner, gear oil and other solvents.

The splash mats are made from a quality sponge with strong absorption and allows fluid to quickly pass through into a funnel or pan.

Ensuring a clean and safe work area is essential to maintain in vehicle workshops and reducing oil splashes is at the top of achieving high standards in daily work practices.

Note that the splash mat is not to be used for coolants or fluids that will be recycled in the vehicle, material fibres may contaminate the fluid.

**SPECIFICATIONS, FEATURES AND BENEFITS**

- 380mm diameter splash mat for waste oil drainers and oil extractors
- Inserts easily into funnels and pans
- Ideal for vehicle workshops
- Allows fluids to quickly pass through into a funnel or pan
- Made from quality sponge with strong absorption
