

## PRODUCT INFORMATION

September 2016

# 611410 3D AdBlue® Filter Cartridge

The 611410 3D AdBlue® filter cartridge is specifically designed for removing debris and crystallisation from AdBlue®.

Whilst AdBlue® is a pure solution, contamination can occur during the filling and transferring process, which can damage the vehicle's SCR system.

The 611410 3D AdBlue® filter cartridge with 70 micron particle filter and flow rates of up to 40L/min is therefore important to prevent damage to your vehicle and keep it within warranty.

With its highly efficient technopolymer filtering element within a protective polyamide casing the 611410 is a disposable cartridge and so it is recommended that it is changed once a year to maintain ongoing vehicle protection.

### PRODUCT SPECIFICATIONS, FEATURES AND BENEFITS

Highly efficient filtering for removing debris & AdBlue® crystallisation

Designed to prevent potential damage caused by contamination

70 micron particle filter

Flow rates of up to 40 L/min

Helps to protect your vehicle warranty

Technopolymer filtering element with protective polyamide casing

The AdBlue® filter cartridge should be changed over once a year

Typical condition of the filter  
after transferring 30,000 litres of AdBlue®
