

F20050N Rotary Drum Pump

August 2019

The Alemlube EL Series F20050N Rotary Drum Pump provides a quick, easy and efficient means of transferring diesel fuel, kerosene, low viscosity oils and hydraulic fluid.

The rotary action of the F20050N requires minimal effort to achieve flow rates of up to 28L/min when transferring from 205L drums.

Robust and reliable, the Alemlube EL Series Rotary Drum Pump is manufactured with an aluminium alloy pump body and a long lasting neoprene seal.

Fully serviceable, the F20050N is the ideal 205L drum pump for every day or intermittent use as required for fuel and fluid transfer operations in the workshop, in the field or out on site at construction or infrastructure works.

SPECIFICATIONS, FEATURES AND BENEFITS

- Flow rates of up to 28L/min
- Aluminium alloy body
- Long lasting neoprene seal
- For use with 205L drums
- Suitable for transferring diesel, kerosene, oil and hydraulic fluid
- Suction distance of up to 1.5m
- Lift capacity of 4.0m
- 1.8m delivery hose, spout & spout holster
- Rotary action can transfer fluids in both directions

* Note: not suitable for use with petrol
