

423021

Samoa 60:1 20kg Heavy Duty Grease Kit

November 2019

The 423021 Samoa 60:1 20kg Heavy Duty Grease Kit is ideal for servicing applications in mining, construction, railroad and mass transit sectors and for use in heavy duty workshops, on lube trucks and for fleet service.

At the heart of the kit is the Samoa 530630 double acting 60:1 ratio 20kg grease pump operating at a maximum pressure of 8,700psi (600bar).

The pneumatic air motor of the Samoa 530630 has a very simple mechanism with only three moving parts and therefore less parts subject to wear. There are no springs present in the mechanism which ensures a long service life and the mechanical end of stroke mechanism provides maximum reliability contributing to non-stalling operation.

The kit is also supplied standard with a drum cover, follower plate, grease control valve with swivel and 2m x 3/8" ID grease delivery hose.

The 423021 Samoa 60:1 20kg Heavy Duty Grease Kit is suitable for use with grease up to NLGI2.

SPECIFICATIONS, FEATURES AND BENEFITS

- Suits 20kg drums
- Samoa 60:1 ratio 20kg heavy duty grease pump
- High pressure grease control valve
- Maximum free flow: 2kg per minute
- Powder coated drum cover with carry handle
- Genuine Samoa grease swivel
- 20kg drum follower plate
- Air inlet / fluid outlet: 3/8" BSPF
- Air consumption: 15.9 cfm
- 2m x 3/8" ID grease delivery hose
- Completely portable for use in the workshop or in the field
- Suitable for use with grease up to NLGI2
