

650A

 450g Push Fill Gun

April 2022

The Alemlube 650A 450g Push Fill Gun is 450g cartridge loader pump specifically designed for the purpose of refilling Alemlube ALS automatic lubrication systems. Fast and efficient grease refilling is easy with 450g cartridges.

The ZZZ100-208 fill coupling (sold separately) is installed in a spare pump element port. Push the outlet of the 650A squarely into the ZZZ100-208 fill coupling and push the plunger in.

Grease loading with this method takes just seconds.

Always ensure that the fill coupling on the Alemlube ALS pump element and the 650A are clean and contaminant free and then squarely connect to the coupling.

It may be necessary to repeat the push process until the pump is full. After which always wipe the fill coupling clean and replace the pump element dust covers.

SPECIFICATIONS, FEATURES AND BENEFITS

- Simple and effective filling from 450g cartridges
- More convenient than using a 20kg drum
- No pneumatic or manual bucket pump required
- Operator can keep the 650A and spare cartridges on board
- Low cost fast contamination free grease filling on site

OPERATING INSTRUCTIONS

1. Ensure the fill coupling and the 650A are clean and contamination free
2. Fit a new grease cartridge into the 650A
3. Press the 650A squarely into the coupling and push the handle in to press the grease into the pump
4. Repeat as necessary until the pump is full
5. Wipe clean and replace the dust covers
