Update February 2022

The 77 Series 5L, 4L, 2L & 1L Container Oil Pumps provide the user with an ideal means of topping up difficult to access oil filling points on motor vehicles, lawn mowers, chain saws, outboard & two stroke motors, and other odd jobs around the workshop and home.

If you or your team undertake low volume oil top ups and changes, utilising the Alemlube 77 Series 5L, 4L, 2L & 1L container oil pumps will make the process a quicker, easier and cleaner proposition.

Suitable for use with low to medium viscosity oils and transmission fluids, the 77 Series pumps are however not suitable for use with petrol, kerosene, turpentine, brake fluids and general purpose hand cleaners.

Delivering up to 6mL on the downstroke, the drainback nozzle holster ensures that the hose & nozzle assembly and lubricant do not end up on your workshop floor.

SPECIFICATIONS, FEATURES AND BENEFITS

- Delivers up to 6mL on the downstroke
- Ideal for topping up difficult to access oil filling points
- Spring operated
- Reliable & robust
- Inclusive of an aluminium spout and a plastic pump head spout holster
