September 2015 Update

53114

Automatic Commercial Vehicle Tyre Inflator

The 53114 Alemlube automatic commercial vehicle tyre inflator is a highly accurate, reliable, pedestal mounted truck and bus tyre inflator with a clear LED digital display.

For increased versatility, the 53114 can also be programmed to produce lower psi pressures suitable for the inflation of passenger car tyres. The user can then easily re-programme the inflator back to commercial vehicle inflation mode.

Modern design and robust build qualities set this electronic pressure preset unit apart from lesser featured devices on the market and the auto-start inflation system and auto release provide real operational benefits.

Accurate inflation can be achieved with the supplied 10 metre air hose and tyre chuck and can even be used with hose lengths up to 25 metres. Additional diagnostics provide essential information to assist efficient commercial vehicle workshop practices.

A true high performer for today's fast paced commercial service centres, the 53114 can be used for inflation, deflation and tyre pressure testing functions.

PRODUCT SPECIFICATIONS, FEATURES AND BENEFITS

240V operation

Electronic pressure preset

Auto-start inflation

Clear LED digital display for fast repeatable accuracy

Supplied standard with 10m of air hose and tyre chuck

Accurate inflation with up to 25m hose lengths

Reading accuracy: ± 1 psi/0.07bar

Maximum inlet pressure: 230psi (16bar)

Maximum inflation pressure: 188psi (13bar)

Inflation speed: 400L/min @ 145psi (10bar)

Dimensions: 246 x 90 x 615mm

Weight: 2.0kg
